----- REVIEW 3 -----

PAPER: 46

TITLE: Age group differences in performance using diverse input modalities: insertion task evaluation

AUTHORS: (anonymous)

OVERALL EVALUATION: 2 (accept)

REVIEWER'S CONFIDENCE: 5 (expert)

----- Review -----

The paper presents an exploratory evaluation to understand how different interfaces may influence the speed and accuracy of three specific groups (children, young and adults).

The experiment used three different ways to interact with the system, physical keyword, soft keyword and gestures. The results are very interesting, because there is evidence that age can be a determining factor when humans interact with computers.
